Annual Drinking Water Quality Report
Pembina, North Dakota
2019

We're pleased to present to you this year's *Annual Drinking Water Quality Report*. This report is designed to inform you about the safe clean water we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. The City of Pembina purchases its water from Northeast RWD-North Valley Branch & their water source is entirely groundwater.

Northeast RWD-North Valley Branch is participating in North Dakota's Wellhead Protection Program. The North Dakota Department of Health has prepared a Source Water Assessment for Northeast RWD-North Valley Branch. Information on both these programs is available to the public during normal business hours. Our public water system, in cooperation with the North Dakota Department of Health, has completed the delineation and contaminant/land use inventory elements of the North Dakota Source Water Protection Program. Based on the information from these elements, the North Dakota Department of Health has determined that our source water as "susceptible" to potential contaminants. No significant sources of contamination have been identified.

This report shows our water quality and what it means.

If you have any questions about this report or concerning your water utility, please contact Gary Helland, Public Works Superintendent, at (701) 825-6932. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Monday of each month at 6:00 PM in Pembina City Office Building. If you are aware of non-English speaking individuals who need help with the appropriate language translation, please call Gary Helland at the number listed above.

Pembina routinely monitors for contaminants in your drinking water according to Federal and State laws. The following tables show the results of our monitoring for the period of January 1st to December 31st, 2019. As authorized and approved by EPA, the state has reduced monitoring requirements for certain contaminants to less often than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of our data [e.g., for inorganic contaminants], though representative, is more than one year old.

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land, or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.
Contaminants that may be present in source water include:

**Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

**Inorganic contaminants**, such as salts and metals, which can be naturally occurring or result from urban storm water, industrial or domestic wastewater discharges, oil production, mining or farming.

**Pesticides and herbicides**, which come from a variety of sources such as agriculture, urban storm water runoff and residential uses.

**Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can, also, come from gas stations, urban storm water runoff and septic systems.

**Radioactive contaminants**, which can be naturally occurring or be the result of oil and gas production and mining activities.

To ensure that tap water is safe to drink, the Environmental Protection Agency (EPA) prescribes regulations which limit the number of certain contaminants in water provided by public water systems.

The Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

In the following table, you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

**Not applicable (NA), No Detect (ND)**

**Parts per million (ppm) or Milligrams per liter (mg/l)** - one part per million corresponds to one minute in two years or a single penny in $10,000.

**Parts per billion (ppb) or Micrograms per liter (µg/l)** - one part per billion corresponds to one minute in 2,000 years, or a single penny in $10,000,000.

**Picocuries per liter (pCi/l)** - Pico curies per liter is a measure of the radioactivity in water.

**Action Level (AL)** - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Treatment Technique (TT)** - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

**Maximum Contaminant Level** - The “Maximum Allowed” (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal** - The “Goal” (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL)** - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG)** - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Violation: Lead/Copper Rule; Lead Consumer Notice: During November & December of 2019, the city of Pembina received a violation for failure to comply with the requirements of the Lead and Copper Rule. The Consumer Notice portion of the rule requires the system to notify the individual samplers of the level of lead in the samples that were taken and to certify the receipt back to the Department of Environmental Quality. The city of Pembina is taking steps to correct this violation by notifying samplers of the results of the samples taken and submitting the required certification form to the Department of Environmental Quality, Drinking Water Program.

*If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Pembina is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. Use water from the cold tap for drinking and cooking. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your drinking water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

EPA requires monitoring of over 80 drinking water contaminants. Those contaminants listed in the table above are the only contaminants detected in your drinking water.

As you can see by the tables on pages 3 & 4 your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected. The EPA has determined that your water IS SAFE at these levels.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency’s Safe Drinking Water Hotline (1-800-426-4791).

MCL’s are set at very stringent levels. To understand the possible health effects described for many regulated contaminants, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons, such as, persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Please call Gary Helland, Public Works Superintendent, at (701) 825-6932 if you have questions.

The City of Pembina works diligently to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life, and our children’s future.
2019 CCR Certification Form
Systems Serving less than 10,000 Persons

PWS Name: Pembina City  

The community water system hereby confirms that the Consumer Confidence Report has been distributed to customers (or appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data.

The following items are mandatory:

Published the CCR in the local newspaper(s) or mailed CCR to all customers, or provided written notice of CCR electronic availability. (For e-delivery, a one-click URL link must lead directly to CCR. If customer prefers paper copy or if electronic delivery is unsuccessful, CCR must be made available through alternate method. Reverse 911 is not allowed.) List the dates and newspapers:

If published, how informed customers the CCR will not be mailed. List methods of notification (must be separate from published report):

List the procedures to make reports available upon request. Specify:

Delivered CCR to North Dakota Department of Environmental Quality DWP.

Delivered CCR to local health unit and/or county health nurse. List below:

Pembina County Public Health 301 Dakota St D #2
Cavalier ND 58220

A statement about the “Good Faith” effort was used in the CCR to reach consumers who do not receive water bills.

The following two “good faith” options were also used:

Delivered multiple copies for distribution by single-bill customers such as apartment buildings or large private employers
posting the CCR on the Internet at

mailed the CCR to postal patrons within the service area (attach zip codes used)

advertised availability of the CCR in news media (attach a copy)

posting the CCR in public places or social media (attach a list of locations)

delivery to community organizations (attach a list)

Certified by: Name Lisa Hall  

Telephone Number 701 825 8819  

Title Auditor/Administrator  

Date 5-7-20

This certification form must be mailed or delivered to the North Dakota Department of Environmental Quality, Drinking Water Program, 918 E Divide Ave, Bismarck, ND 58501-1947 within three months of notification to all customers or by October 1, 2020.
